

New design, higher quality and safety in new packaging

The company Wavin Czechia aims at better and more efficient solutions in the field of packaging materials. From October 2020, the packaging material (cardboard boxes) for fittings in the Ekoplastik system product line will be changed.

Why new packaging?

Higher material quality

- ⦿ thicker double-walled cardboard, 5
- ⦿ more durable, ECT value 8,1 KN/m

Higher safety during transportation

- ⦿ resistance of the packaging in case of a fall or poor handling

More efficient storage process

- ⦿ simplification of the process of the goods warehousing
- ⦿ greater stability of pallets and ergonomic handling of goods

Ecology

- ⦿ lower paper consumption only 2 box sizes instead of 8
- ⦿ internal dimensions of boxes:
380 × 280 × 115 mm
380 × 280 × 180 mm

The change will be gradual according to the current stock of the original boxes. As part of this optimization, the maximum number of pieces will be limited in a small package to 20 pieces. The SAP codes and catalogue codes will not be changed.
